

Georg von Westphalen

THE GOLDEN HOUR GAUNTLET

RESUSCITATION, RHYTHMS
& THE TRIAGE TEMPEST

Panic is contagious. Resuscitation is the cure. Stay fluffy!

Card 01: Airway-Annie (The Open Pipe)

POWER: Annie ensures oxygen reaches the lungs. If blocked by debris or a swollen tongue, the match ends in minutes.

LORE: Protecting the airway is the prime directive. Upper airway compromise demands the Tube-Tango (Intubation) to prevent asphyxiation.

STAT: GCS < 8
= Intubate

Card 02: Breathing-Ben (The Bellows-Master)

STAT: SpO2 < 94%/
RR > 30 or < 8

POWER: Ben manages the gas exchange. If the chest isn't rising, Ben deploys the BVM-Bag or the Chest-Tube-Chisel.

LORE: Focus on tension. If obstructive pressure pushes the heart aside, the Needle-Decompression-Nudge restores ventilation.

KayfaBIZARRO!

KayfaBIZARRO!

Card 03: Circulation-Cyril (The Tank-Filler)

STAT: MAP < 65 mmHg
Cap Refill > 2s

POWER: Cyril manages the pressure pipes. If the blood leaks or the pump stalls, Cyril initiates fluid-flooding.

LORE: Shock is a failure of perfusion. Deploy the Two Large-Bore strategy to keep organs from dying of thirst.

Card 04: Disability-Dave (The Brain-Scan)

STAT: GCS / Pupils /
Blood Glucose

POWER: Dave checks the Mainframe. If pupils are fixed and dilated, suspect a massive bleed.

LORE: Always check the sugar! A low glucose crash mimics a stroke but only needs a Dextrose-Drop to be defeated.

BLÖDSINN!

**Card 05: V-Fib-Vinnie
(The Static Storm)**

POWER: Vinnie makes the heart quiver like a bag of worms. Zero blood moves.

LORE: Vinnie needs the Electrical-Reset-Button. Defibrillation stops the chaos so the natural pacemaker can regain command.

STAT: Chaotic ECG / Pulselessness

What the
FLUFF?!

**Card 06: Flatline-Fred
(The Silent Death)**

STAT: Flatline / No Pulse

POWER: Fred is the absence of life. He cannot be shocked.

LORE: You cannot shock a dead battery. Fred requires high-quality CPR and the Epi-Injection-Engine every 3-5 minutes.

KayfaBIZARRO!

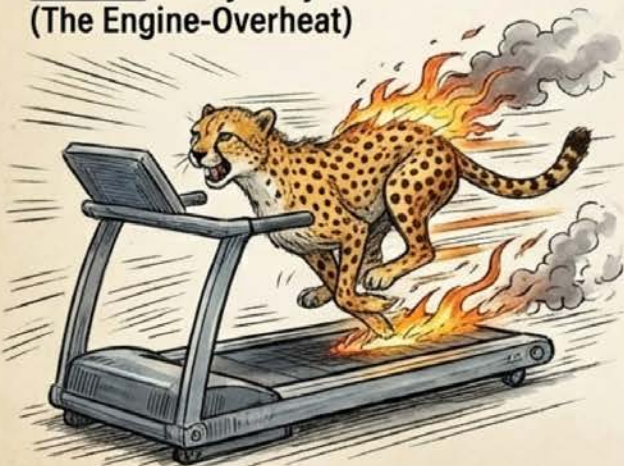

**Card 07: Tachy-Tony
(The Engine-Overheat)**

**STAT:
Rate > 150**

POWER: Tony runs the heart so fast that the filling chambers never have time to load blood.

LORE: Unstable?
Synchronized-Zap.
Stable? Adenosine-Reset.

What the
FLUFF?!

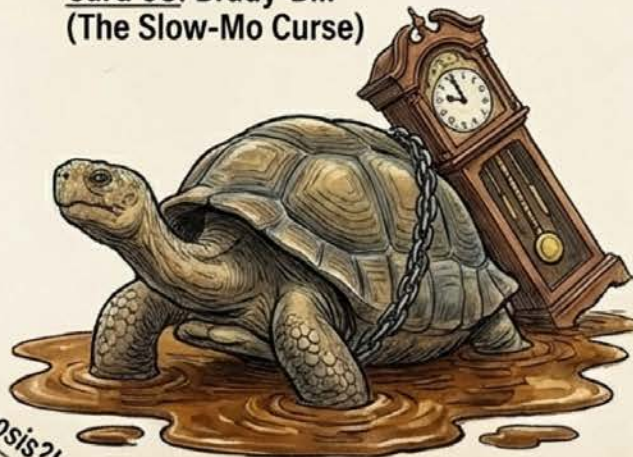

**Card 08: Brady-Bill
(The Slow-Mo Curse)**

**STAT:
Rate < 40**

POWER: Bill makes the heart beat so slowly that the brain blacks out from lack of pressure.

LORE: Usually a wiring issue. Atropine might speed him up, but an external battery (Pacing) is the real fix.

Diagnosis?!

KayfaBIZARRO!

Card 09: Anaphylaxis-Annie
(The Global Leak)

STAT: Urticaria
+ Hypotension

POWER: Annie turns blood vessels into sieves and slams the airway door shut with explosive edema.

LORE: Triggered by allergens. Epinephrine is the only key to constrict the pipes and open the lungs simultaneously.

KayfaBONGO!

Card 11: Cardiogenic-Carl
(The Broken Piston)

STAT: JVD
+ Wet Lungs

POWER: Carl fails to push. Blood backs up into the lungs, drowning the patient from the inside.

LORE: Fluid is the enemy. Carl needs Inotrope-Ignition to boost pump strength and an immediate trip to the Cath Lab.

HUMBUG!

Card 10: Septic-Sam
(The Vasodilation-Vortex)

STAT: MAP < 65
+ Lactate > 2

POWER: Sam uses a Cytokine-Tsunami to paralyze blood vessels, causing total pressure collapse.

LORE: Sam demands the Hour-1-Bundle: massive fluids, cultures, and early Pressor-Power (Norepinephrine).

KayfaBONGO!

Card 12: Hypovolemic-Hank
(The Dry-Run)

STAT: Cold Extremities
+ Flat Veins

POWER: Hank strikes when volume is missing. There simply isn't enough juice left to keep the lights on.

LORE: Replace what is lost! If it's blood, give blood. If it's water, give crystalloids.

Card 13: Epi-Eric (The Adrenaline-Jumpstart)

POWER: Eric violently constricts the pipes and screams at the heart to beat faster.

LORE: The king of the Code Blue. He diverts all remaining blood to the brain and heart during the fight.

STAT: 1mg IV (Code)
/ 0.5mg IM (Allergy)

Card 14: Ami-the-Armor (The Rhythm-Shield)

POWER: Ami stabilizes the heart's electrical wires to keep the static storm of V-Fib from returning.

LORE: A Class III antiarrhythmic. It buys critical time for the heart to find its normal beat again.

STAT: 300mg Bolus
(V-Fib)

MedKayfabe!

Card 15: Atropine-Alice (The Brake-Cutter)

STAT: 0.5mg
- 1mg doses

POWER: Alice cuts the Vagus-Brake, completely removing the inhibitory signals slowing down the heart.

LORE: An anticholinergic assassin. She stops the Rest and Digest system from ending the match prematurely.

MedKayfabe!

Card 16: Adenosine-Andy (The 6-Second Flatline)

STAT:
6mg → 12mg
→ 12mg Rapid

POWER: Andy stops the heart completely for a few terrifying seconds, forcing it to reboot into a normal rhythm.

LORE: Used for SVT. It feels like a massive thump in the chest to the conscious patient.

KayfaBONGO!

KayfaBONGO!

Card 17: Tension-Tony (The Heart-Crush) STAT: Tracheal Deviation + Hypotension

POWER: Tony traps air in the chest on a one-way valve, building pressure until the Great Vessels are squashed flat. **LORE:** A clinical diagnosis! Do not wait for X-ray. Execute the Needle-Decompression-Nudge in the 5th intercostal space immediately.

Card 18: Narcan-Nancy (The Opiate-Evictor)

STAT: RR < 8 + Pinpoint Pupils

POWER: Nancy violently rips opiates off the brain's receptors, bringing the patient back to life instantly. **LORE:** Beware the short half-life! Nancy might wear off before the opiate does, throwing the patient back into a coma.

Card 19: Gluca-Gwen (The Sugar-Summoner) STAT: Sugar < 50 / Beta-Blocker Tox

POWER: Gwen forces the liver to dump its entire emergency stash of sugar into the blood. **LORE:** Beyond low sugar, Gwen is the secret key to restart the engine during a lethal Beta-Blocker overdose.

Card 20: Aspirin-Ace (The Platelet-Slip)

STAT: 300mg Chewed

POWER: Ace makes the blood-clotters slippery so they can't block the Coronary-Canyons. **LORE:** Reduces mortality in Myocardial Infarction by preventing the Clot-Monster from growing any larger.

BLÖDSINN!

Call Doc Frizzle!

Card 21: Heat-Stroke-Harry (The Internal Oven)

STAT: Core Temp > 40 C + Coma

POWER: Harry cooks the body's proteins from the inside out. Sweat production has utterly failed.

LORE: A true emergency. Harry requires immediate, aggressive physical cooling (ice water/fans) before the brain permanently melts.

Card 22: Frosty-Frank (The Metabolic Freeze)

STAT: Core Temp < 35 C / J-Waves

POWER: Frank slows cellular time down to a crawl until the heart stumbles into fatal V-Fib.

LORE: Nobody is dead until they are warm and dead! Frank requires extremely careful, active internal rewarming.

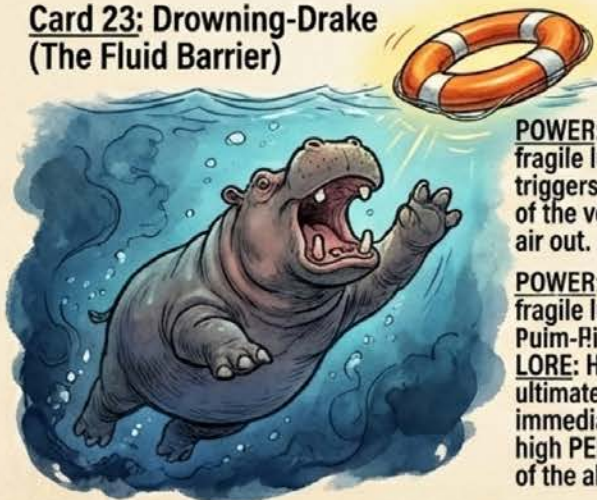

Stay fluffy!

KayfaBOGGLE!

Card 23: Drowning-Drake (The Fluid Barrier)

Stay fluffy!

POWER: Drake fills the fragile lungs with water, or triggers an iron-tight spasm of the vocal cords to lock air out.

POWER: Drake fills the fragile lungs with water, or Puim-Fippo lot air out.
LORE: Hypoxia is the ultimate killer. Drake requires immediate ventilation and high PEEP to push fluid out of the alveoli.

Card 24: Burn-Ben (The Barrier Break)

STAT: Rule of Nines / Parkland Formula

POWER: Ben destroys the skin shield. Core water evaporates instantly, and bacterial armies march in.

LORE: Massive volume loss is the silent threat. Ben requires enormous amounts of Ringer's Lactate in the first 24 hours.

Stay fluffy!

Card 25: Carbon-Monoxide-Carl (The Hemoglobin Hijack)

STAT: SpO2 falsely normal

POWER: Carl binds to the oxygen bus 240 times stronger than O₂. The pulse oximeter lies to you.

LORE: The patient suffocates despite ample oxygen in the room. Carl demands 100% O₂ or a hyperbaric pressure chamber.

Card 26: Organophosphate-Otto (The Cholinergic Storm)

STAT: SLUDGE
(Salivation, Lacrimation...)

POWER: Otto blocks the cleanup of nerve signals; the entire parasympathetic system is stuck on Full Fire.

LORE: Otto requires massive, repeated doses of Atropine-Alice until the lungs are finally dry.

KayfaBIZARRO!

Diagnosis?!

Card 27: Beta-Blocker-Ben (The Heart-Slug)

STAT: Bradycardia + Hypotension

POWER: Ben suppresses the beta-receptors, slowing the heart's rate and squeeze down so much that it nearly stalls.

LORE: If standard Atropine fails to break the lock, Gluca-Gwen is the chemical bypass key needed to restart the engine.

Card 28: Tricyclic-Ty (The Electrical Chaos)

STAT: QRS widening / Seizures

POWER: Ty blocks crucial sodium channels, widening the QRS complex and throwing the heart into a deadly chaotic rhythm.

LORE: The specific antidote is Sodium Bicarbonate—it floods the channels with sodium to flush Ty out and stabilize the wires.

Card 29: Pregnant-Pam (The Return-Block)

STAT: Pregnancy > 20w / Left Lateral

POWER: The heavy uterus physically crushes the Inferior Vena Cava when lying flat, preventing blood from returning to the heart.

LORE: During CPR, the uterus must be manually shifted to the left, otherwise compressions are pumping an empty heart.

Card 30: Pediatric-Paul (The Respiratory Trigger)

STAT: 15:2 Compressions
(2 Rescuers)

POWER: In children, cardiac arrest is rarely a primary pump failure; it is almost always driven by fatal hypoxia.

LORE: Ventilation is the absolute priority. Airway management saves pediatric lives before the heart ever stops.

Stay fluffy!

Card 31: Trauma-Tanya (The Death Spiral)

STAT: Acidosis + Coagulopathy + Hypo-T

POWER: Tanya alters physics: blood absolutely refuses to clot when the body gets cold and acidic.

LORE: Damage Control Resuscitation: Keep them warm, stop the bleed, avoid crystalloids, and pump high ratios of blood products.

Stay fluffy!

Card 32: Obese-Oliver (The Physical Barrier)

STAT: Difficult Airway / High Wall Load

POWER: Oliver's sheer mass makes achieving adequate chest compression depth and effective ventilation a monumental physical ordeal.

LORE: Manual CPR fatigues rescuers instantly. Mechanical CPR devices and advanced airway planning are mandatory here.

Stay fluffy!

Card 33: Defi-Dan (The Resetter)

STAT: Monophasic vs. Biphasic Joules

POWER: Dan sends a violently controlled electrical punch directly through the heart muscle to end all chaotic activity.

LORE: Dan discharges every cardiac cell simultaneously, creating a moment of total silence so the pacemaker can restart the beat.

Card 34: BVM-Bill (The Manual Breath)

STAT: C-E Grip / 10-12 breaths/min

POWER: Bill forcefully presses oxygen down into the lungs when the patient's own bellows fail.

LORE: Avoid gastric inflation! Squeezing Bill too hard forces air into the stomach, guaranteeing a vomit tsunami.

What the FLUFF?!

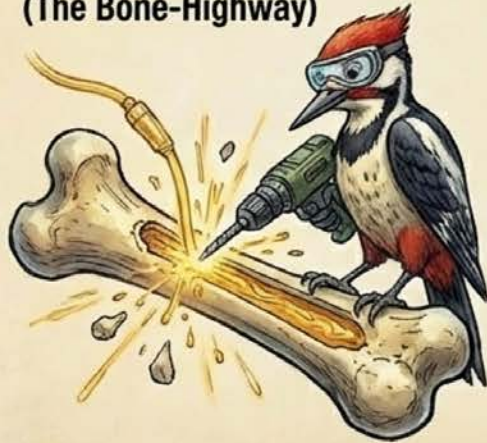

MedKayfabe!

Card 35: IO-Iggy (The Bone-Highway)

STAT: Tibia or Humerus target

POWER: When peripheral veins collapse into hiding, Iggy violently drills a direct fluid highway right into the bone marrow.

LORE: The bone marrow is a non-collapsible vein. Anything you can push in an IV, you can push through Iggy.

What the FLUFF?!

Card 36: Laryngoscope-Larry (The Tongue-Lifter)

STAT: Mac (Curved) vs. Miller (Straight)

POWER: Larry physically wrestles the heavy tongue out of the way, lighting a path through the dark tunnel to the vocal cords.

LORE: Larry is the essential scouting tool required for Airway-Annie to successfully place the Golden Tube.

What the FLUFF?!

Card 37: Stroke-Steve (The Brain-Ischemia)

STAT: FAST Score / NIHSS

POWER: Steve blocks a vital arterial supply line in the head. Every passing minute, millions of neurons permanently die.

LORE: Time is Brain! Steve demands either the Clot-Dissolver (Lysis) or the Mechanical Grabber (Thrombectomy) immediately.

KayfaBINGO!

KayfaBINGO!

Card 39: Brain-Bleed-Brawler (The Pressure-Cooker)

STAT: Worst headache of life

POWER: The Brawler leaks expanding blood into the rigid skull. Because the bone won't yield, intracranial pressure spikes instantly.

LORE: The Brawler triggers the Cushing Reflex (High BP, Low Pulse) as the brain desperately fights to push blood against the rising crush.

BLÖDSINN!

Card 38: Seizure-Sidus (The Electrical Firestorm)

STAT: Duration > 5 min

POWER: Sidus forces the brain to fire at maximum capacity uncontrollably, burning incredible energy and risking permanent melting.

LORE: Sidus needs GABA-Garry (Benzodiazepines) immediately to extinguish the runaway electrical fire.

KayfaBINGO!

KayfaBINGO!

Card 40: Hypo-Harry (The Mimic)

STAT: Glucose < 50 mg/dl

POWER: Harry flawlessly disguises himself as Stroke-Steve or Seizure-Sidus, tricking medics until sugar reveals his true identity.

LORE: The brain needs glucose like a car needs gas. Without juice, the engine completely stalls. Always check the sugar!

BLÖDSINN!

Card 41: FAST-Fiona (The Fluid-Finder)

STAT: 4 Windows (Perihepatic...)

POWER: Fiona shoots high-frequency sound to hunt down hidden, pooling blood in the belly or trapped around the heart in seconds.

LORE: A positive Fiona signal in a hemodynamically unstable trauma patient is a direct, one-way ticket to the operating room.

Card 42: Lactate-Larry (The Suffocation-Score)

STAT: Value > 2 mmol/l

POWER: Larry acts as the cellular distress signal, revealing exactly how badly the tissues are starving and crying for oxygen.

LORE: High Larry means occult shock is happening at the cellular level, regardless of how normal the blood pressure currently looks.

Diagnosis?!

Diagnosis?!

KayfaBINGO!

KayfaBINGO!

Card 43: Troponin-Troy (The Muscle-Damage Detector)

STAT: High-sensitivity / Rises in 2-3h

POWER: Troy is exclusively released when cardiac muscle cells are actively dying and breaking apart.

LORE: Troy is highly specific—if you find these nuggets in the bloodstream, you have absolute proof of a Myocardial Infarction.

Card 44: Blood-Gas-Bella (The Acid-Base Balance)

STAT: pH, pCO₂, pO₂, HCO₃, BE

POWER: Bella reveals the invisible metabolic scale: is the wrestler acidic or basic, and are the lungs or the kidneys to blame?

LORE: Bella is the ultimate high-fidelity dashboard for fine-tuning mechanical ventilation and targeted fluid resuscitation.

Diagnosis?!

Diagnosis?!

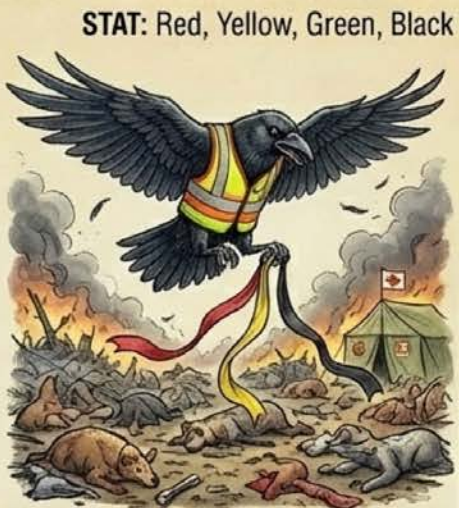

Call Doc Frizzle!

Card 45: Triage-Raven (The Life-Decider)

POWER: In mass casualty chaos, Raven makes the ruthless, split-second decisions about who gets the limited medical resources.

LORE: Normal medical ethics invert here. The ultimate goal is the survival of the many, not the desperate rescue of the individual.

STAT: Red, Yellow, Green, Black

Card 46: Scoop vs Stay (The Tactical Choice)

POWER: The ultimate operational fork: Immediate, frantic transport for surgical bleeding, versus methodical on-scene stabilization for medical codes.

LORE: Treat as you go. But critical bleeding and airway obstruction are always addressed before the wheels roll.

STAT: Time on scene < 10 min (Trauma)

Call Doc Frizzle!

MedKayfabe!

KayfaBINGO!

KayfaBINGO!

Card 47: HEMS-Heidi (The Sky-Cavalry)

STAT: Flight time vs. Ground time

POWER: Heidi completely bypasses ground traffic, bringing the highest level of specialized doctor and equipment directly to the dirt.

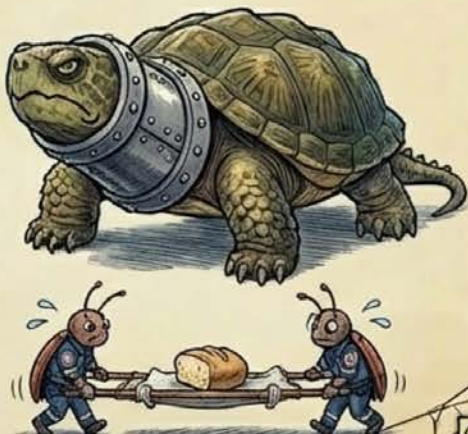

LORE: Heidi radically expands the geographical capture radius for highly time-sensitive interventions (Stroke Centers / Level 1 Trauma).

Card 48: C-Spine-Chris (The Spine-Guard)

POWER: Chris ensures that the fragile spinal cord isn't shredded by unstable, shattered vertebrae during rescue movements.

LORE: Respect the Log Roll. The patient must be turned as a single, rigid tree trunk to avoid permanently angering Chris.

STAT: Cervical Immobilization Collar

Call Doc Frizzle!

MedKayfabe!

Card 49: Handover-Hank
(The MIST Protocol)

STAT: Mechanism,
Injuries, Signs, Tx

POWER: Hank perfectly transfers critical field knowledge from the muddy EMS team to the sterile shock-room team without dropping a byte.

LORE: A dropped baton is lethal. A poor Honk kills the patient through hospital ignorance and delayed interventions.

Card 50: Shock-Room-Sgt
(The Chaos-Control)

STAT: Closed Loop
Communication

POWER: The Sgt coordinates trauma surgeons, anesthesiologists, and nurses in a perfectly choreographed, silent dance.

LORE: Without the Sgt commanding the room from the foot of the bed, the high-tech shock room instantly degrades into a noisy chicken coop.

Card 51: Transfusion-Tank
(The Blood-Flood)

STAT: Ratio 1:1:1
(RBC, FFP, Platelets)

POWER: When Hypovolemic-Hank drains this blood, the Tank overrides the system, refilling the wrestler with actual, life-saving hemoglobin and platelets.

LORE: Clear fluids only dilute clotting factors. In massive hemorrhage, only blood replaces blood.

Card 52: Recovery-Ranger
(The Safety Guard)

STAT: Stabilized
Vitals / ICU Admission

POWER: The Ranger stands guard, monitoring the fragile equilibrium after the Golden Hour Gauntlet has been violently survived.

LORE: The post-resuscitation phase is incredibly critical: the war is won, but the assassins will return if the Ranger falls asleep.

Stay fluffy!

KayfaBIZARRO!

Call Doc Frizzle!

MedKayfabe!

KayfaBINGO!

MedKayfabe!

MedKayfabe!

Card 53: Doc FrizzleBob (The Final Decision)

STAT: 100% Chaos-Resistance

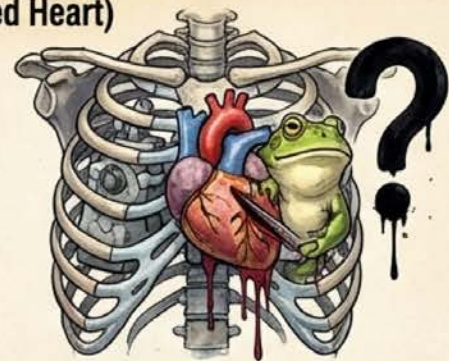

POWER: Cuts through the noise. Operates on pure clinical instinct backed by hardcore physiological lore.

LORE: Treat the life-threats, not the labs. If the pump is dry, fill it. If air is trapped, vent it. Stay fluffy!

Card 54: Synthesis Quest 1 (The Crushed Heart)

STAT: JVD + Hypotension + Muffled

POWER: Identify the mechanical stopper (Tamponade) squeezing the heart.

LORE: Which intervention clears the blood from the pericardial sac before the pump stalls forever?

Call Doc Frizzle!

MedKayfabe!

KayfaBINGO!

Card 55: Synthesis Quest 2 (The Silent Choke)

STAT: Pediatric GCS 6 + Stridor

POWER: Activate the ABCDE sequence under maximum stress.
LORE: Who secures the way (Airway-Annie) and who breaks the fatal allergic reaction (Epi-Eric)?

Card 56: Synthesis Quest 3 (The Quivering Void)

STAT: Chaos + Pulseless

POWER: The ultimate algorithmic decision tree.

LORE: Name the rhythm (V-Fib). Compress, shock, or push drugs? You have 5 seconds to decide. Go!

Stay fluffy!

Call Doc Frizzle!
