

FORGET UTOPIA. IGNORE DYSTOPIA. EMBRACE PROTOPIA.

Uncle FrizzleBob's
KayfaBizarro Komik
Kult Kards for Tomorrow.

THE SKETCH / Finished is for tombstones. Draw it in pencil.

The Open Notebook

POWER: Picture the future as a page with room left on it, not a poster on a wall.

LORE: Protopia is the idea that the future is a process of slow, incremental improvement you participate in.

The Erasable Line

POWER: Draw the next step in pencil. Pencil means you expect to be wrong and stay anyway.

LORE: The ability to correct beats the appearance of certainty.

The Ugly First Draft

POWER: Make the first version bad on purpose. Bad is how you know it is real.

LORE: Starting before you are ready produces better results than waiting for a perfect plan.

The Next Pass

POWER: Do not finish it. Improve it once, then leave it better and open.

LORE: Continuous small improvement treats work as never finished, compounding into large change.

THE SMALL REPAIR / Revolutions are brochures. Fix the damn gate.

The Fixable Thing

POWER: Find one broken thing close enough to touch.

LORE: Reframing a vast problem as a specific, local, finishable task restores the sense that action is possible.

The Right-Sized Move

POWER: Choose a repair you can finish this week, not a revolution you can only announce.

LORE: A series of small wins builds momentum and evidence that larger change is possible.

The Boring Win

POWER: Accept that small fixes do not trend. They just hold.

LORE: Maintenance and repair are systematically undervalued because they are undramatic.

The Compounding

POWER: One repair a week is fifty-two a year. Nobody clapped, and the place is different.

LORE: Small consistent improvements accumulate non-linearly over time, outperforming heroic one-offs.

Stay fluffy!

09

The Held Breath

Before reacting, take the one breath the feed is built to deny you.

A deliberate slow exhale activates the parasympathetic system, a fast physiological route from reaction back into thinking.

11

The Boring Gap

Let stillness feel like falling behind. It is actually catching up to yourself.

Brief disengagement and mind-wandering support consolidation, so the empty moment is where understanding forms.

The Reclaimed Second

Place attention on purpose. Take one second back, then another.

The Lower Lung

Breathe low enough to think. The nervous system votes with oxygen.

Reclaiming attention begins with regulating the physical body that carries it.

12

THE NEIGHBOR / Authority is overrated. Proximity gets it done.

The Person Nearby

POWER: Authority is overrated, proximity is underrated. Ask the one who actually does the thing.
LORE: Real know-how is tacit knowledge, learned by doing and living in practitioners.

The Practitioner

POWER: Trade the forecaster's confidence for the neighbor's callus.
LORE: Skills and knowledge are sustained and passed on within communities of practice bound by shared doing.

The Unimpressive Source

POWER: Notice that real know-how is often badly dressed and lives three doors down.
LORE: Authority signals like polish and credentials can be inversely related to hands-on competence.

The Shared Skill

POWER: Pass knowledge hand to hand. It cannot be deplatformed.
LORE: Knowledge held and taught within a community is robust against single points of failure.

THE WORK PARTY / Clumsy is the entry fee for the barn raising.

The Invitation

POWER: Turn watching into showing up. Name a time, a place, a task.

LORE: Action is far more likely when it is specific and social, converting vague intention into behavior.

The Shared Hands

POWER: Split a problem the way your ancestors raised a barn.

LORE: Mutual aid is a deep and widespread survival strategy across species, older than money.

The Awkward Start

POWER: Go to the first small, clumsy gathering anyway. Clumsy is the entry fee.

LORE: The willingness to tolerate an awkward beginning separates groups that form from groups that stay imagined.

The Thicker Rope

POWER: Build together until the crowd can act, not just feel together.

LORE: Communities that self-organize shared resources thicken over repeated cooperation.

TODAY / Someday is a place where nothing gets built.

The Available Hour

POWER:

The future you can touch is the next few hours. Start there.

LORE:

Action only ever occurs in the present, making today the only workable unit of the future.

The Done Thing

POWER:

Trade one perfect someday for one finished today.

LORE:

A completed small action changes the world more than a large intended one.

The Unsexy Now

POWER:

Accept that today's improvement is small and real. Both are features.

LORE:

Taking small concrete actions before motivation arrives reliably lifts mood and agency.

The Standing Record

POWER:

Act now, because now is the only place leverage lives.

LORE:

Agency is structurally located in the now; the past is fixed and the future is unreachable.

What the
GW

Georg v. Westphalen

THE STRANGER / They might block you. Say hello anyway.

The Unknown Face

POWER: Treat the stranger as a possible ally with a different toolbox, not a threat.

LORE: Humans succeeded as a species through unusual friendliness to non-kin.

The First Hello

POWER: Lower the bar to contact. Most cooperation starts embarrassingly small.

LORE: Low-stakes contact between groups reliably reduces prejudice.

The Risk of Being Soft-Blocked

POWER: Accept that they might not respond. Your nervous system thinks that is death. It is not.

LORE: Social rejection registers in the brain like physical pain—an outdated survival alarm.

The Widened Circle

POWER: Go first. Every ally was a stranger until somebody did.

LORE: Reciprocal strategies that begin by cooperating outperform purely defensive ones.

★ KayfaBOGGLE! ★

CURIOSITY / Wonder costs less than hope and lasts longer than fear.

BLÖDSINN!

The Open Question

POWER: Run on huh, I wonder, instead of we are doomed or we are saved.
LORE: Intrinsic motivation produces better learning and persistence than reward or fear.

The Cheap Experiment

POWER: Framed as an experiment, wonder costs less than hope.
LORE: Framing situations as experiments reduces the paralysis of needing a guaranteed outcome.

The Wrong Answer

POWER: Be wrong a lot. Curiosity treats that as data, not defeat.
LORE: Treating mistakes as feedback is what allows iteration to converge on what works.

The Widening Mind

POWER: Let interest expand attention where fear shrinks it.
LORE: Positive states like curiosity broaden the range of thoughts and actions a person considers.

BLÖDSINN!

THE NOTEBOOK / Out of how many? Trust your own dirty ledger.

The Logged Observation

POWER: Write down what you actually saw, not what the headline said you would see.

LORE: Keeping a direct record over time counters the distortions of memory and media.

The Honest Denominator

POWER: Count the whole thing, including the times it worked and nobody noticed.

LORE: Attending to base rates corrects the overweighting of vivid, alarming cases.

The Inconvenient Entry

POWER: Keep the notes that argue against you. Those are the valuable ones.

LORE: Actively seeking disconfirming evidence separates inquiry from rationalization.

The Track Record

POWER: Trust a page of your own observations over a year of someone else's predictions.

LORE: Personal calibrated records outperform remembered impressions and forecasts.

KayfaBIZARRO!

THE HANDS / Calluses are a kind of literacy. Get your paws dirty.

The Made Thing

POWER: Make something with your hands this week. Bread, a fix, a fence.

LORE: Craftsmanship connects skill, material, and judgment, building a grounded sense of agency.

The Returned Attention

POWER: Let manual work pull attention out of the loop and back into the room.

LORE: Absorbing, skill-matched activity produces flow that displaces rumination.

The Slow Reward

POWER: Work at the speed of hands. That is not a bug, it is the medicine.

LORE: Effortful, slower processes produce deeper learning and satisfaction than frictionless ones.

The Restored Limb

POWER: A muscle you use stays yours. Friction is what keeps the grip.

LORE: Capacities are maintained through use, resisting the quiet erosion of disuse.

Stay fluffy!

THE SIDE DOOR / Don't storm the front gate. Find the unguarded draft.

The Small Opening

POWER: Do not storm the front gate. Find the side door nobody guards.

LORE: Change often enters through small, low-resistance points rather than direct confrontation.

The Pilot Move

POWER: Run a tiny version. Low stakes, real feedback, no permission needed.

LORE: Small reversible experiments let you learn what works at low cost before committing.

The Quiet Sabotage

POWER: Improvement often looks like mild disobedience to a stuck system.

LORE: Small principled noncompliance is a constructive act when declining to cooperate with a broken rule.

The Proof of Concept

POWER: Build the working example. One beats a thousand arguments.

LORE: A functioning demonstration shifts a debate more than rhetoric does.

KayfaAaBINGO!

THE COST: YOUR CERTAINTY / Doubt is the invoice for getting your agency back.

The Surrendered Sure

POWER: Give up being certain. It is harder than giving up money.

LORE: Tolerance of ambiguity is a learnable disposition required for protopia.

The Comfort of Maybe

POWER: Trade the warm baths of hopeless and handled for the cold shower of it depends on us.

"IT'S UP TO US!"

LORE: Giving up the relief of certainty is the discomfort protopia asks you to accept.

The Ongoing Effort

POWER: Accept there is no final version. The cost is showing up again next week.

LORE: Durable improvement is maintained, not achieved once.

The Worthwhile Bill

POWER: Pay in certainty and comfort. Get back the wheel the other two decks took.

LORE: The trade protopia offers is the discomfort of ongoing uncertainty in exchange for restored agency.

THE TELL: ALWAYS UNFINISHED / Seams are honesty. Seamlessness is a trap.

The Visible Seam

POWER: If you can see how it was made, you can remake it. Seams are honesty.

LORE: Showing the seams of a system lets people understand, question, and modify it.

The Open Question

POWER: If it invites your question instead of closing it, you are in the workshop.

LORE: Systems that remain genuinely open to revision are the structural signature of participatory process.

The Plural Path

POWER: If there is more than one way forward, it is a future, not a funnel.

LORE: The presence of multiple viable paths signals genuine agency.

The Rough Test

POWER: The rougher and more inviting it is, the more likely it is yours to edit.

LORE: Visible imperfection signals an unfinished thing still open to your hand.

THE TURN / Answer with your paws. What can be improved today?

The Nearest Lever

POWER: Look around the actual room you are in. Find the one thing within arm's reach.

LORE: Effective change starts from where you already have leverage and access.

The One Percent

POWER: You do not need the whole future. You need today, one percent better.

LORE: Marginal gains, small improvements compounded consistently, produce large results.

The Quiet Start

POWER: Nobody will clap. Start anyway. The clapping was never the point.

LORE: Action driven by intrinsic purpose is more durable than action requiring applause.

THE CORE QUESTION

POWER: Forget the brochure. Ignore the loop. Pick up the pencil.

LORE: Agency is recovered by converting the vast question of the future into one workable thing you can do now.
